

## TOK exhibition examiner's comments

### Example H

This exhibition was awarded a mark of 3/10.

It is an example of an exhibition where the student has focused too much on technology rather than on "knowledge and technology". The student has focused on how technology has changed over time, rather than using examples relating to technology to focus on how knowledge has changed over time. Because of this the response lacks relevance to the prompt.

Another key weakness of this exhibition is that the objects selected are overly generic. Rather than generic objects such as "a laptop", the student needed to identify objects that have a specific real-world context—objects that exist in a particular time and place.
